MT7986 Thermal Service Application Note

2021/3/11 Judy Huang

Version History

Version	Date	Author (Optional)	Description
0.1	2021-3-11	Judy Huang	Initial draft
1.0	2022-2-2	Micheal Su	Official release

Outline

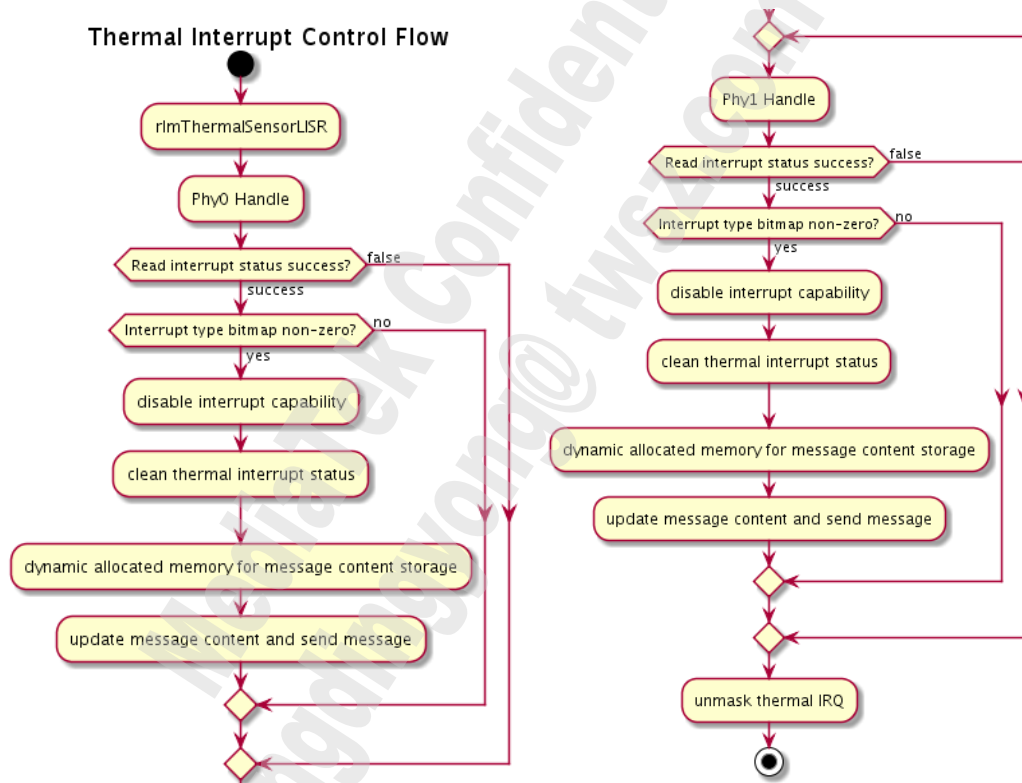

- ❑ Purpose
- ❑ Thermal Interrupt Control Flow
- ❑ Thermal ADC and Temperature Transformation
- ❑ iwpriv command

Purpose

- **Get HW temperature status, and trigger thermal interrupt for temperature related action handler. SW can set thermal task by composing thermal interrupt flag, thermal interrupt threshold, and thermal task handler.**
- **Once an HW interrupt is triggered, thermal task handler would execute and config new interrupt threshold.**

Thermal Interrupt Control Flow

Thermal Interrupt Control Flow

Thermal ADC and Temperature Transformation

- Read Efuse column for transformation relationship slope calibration value and offset calibration value.
- For thermal adc value Y(n), Temperature in Celcius
- $T(n) = (Y(n) - \text{Calibration Part}) * (\text{THERMO_TEMP_SWEEP} / \text{THERMO_CODE_SWEEP} + \text{Slope} / 100) + \text{THERMO_REF_OFFSET_DEF} + \text{Compensation Offset}$

Element	Efuse Offset (mt7915)	Field Description
THADC Analog part	0x9A6	
THADC Slope part	0x9A7	[7]: valid bit (1: valid, 0: invalid) [4:0]: slope variance value (2's complement)
THADC Calibration part	0x9A8	[7]: valid bit (1: valid, 0: invalid) [6:0]: adc calibration value <i>P.S. Default value is 54 when invalid</i>
THADC Compensation Offset	0x9A9	[7]: valid bit (1: valid, 0: invalid) [6:0]: offset compensation value (2's complement)

THERMO_TEMP_SWEEP = 209
 THERMO_CODE_SWEEP = 100
 THERMO_REF_OFFSET_DEF = 28

iwpriv command

- **# read temperature (temperature in °C)**
 - iwpriv ra0 set get_thermal_sensor=0
- **# read temperature (ADC value)**
 - iwpriv ra0 set get_thermal_sensor=1
- **# check thermal tasks: threshold/ trigger enable**
 - iwpriv ra0 set ThermalTaskInfo=0
